

Unicom Category 6 Channel Performance

Channel Performance **Exceeds** TIA/EIA
Category 6 **NEXT** standard

Channel Performance **Exceeds** TIA/EIA
Category 6 **Return Loss** standard

Channel Performance **Exceeds** TIA/EIA
Category 6 **Attenuation** standard

Why Unicom's **x6** Category 6?

Double the Bandwidth = *More Applications*

With the need for reliable, high-speed communication and the increased traffic being generated on a daily basis, users find more bandwidth critical. Many copper systems are not able to fully support these higher transfer rates.

Unicom knows this, which is why we developed the x6™ System. Our Category 6 system is designed to handle more applications and higher traffic; easily and efficiently.

More Headroom = *Less Downtime*

As traffic levels intensify, current networking systems reach their maximum performance level. This translates into long wait times and poor streaming media quality.

Networks composed of an x6™ System from Unicom will experience less downtime compared to users of current Category 5 and 5e solutions.

Future Proofing = *Long Term Savings*

Are you prepared for tomorrow's network demands or heading for congestion?

Installing an x6™ System from Unicom ensures the value and extra performance needed to push the limits of bandwidth hungry applications such as 100Base-TX, 1000Base-T, Streaming Video, and Voice over IP (VOIP).
